7. Method of Manufacture

Loch Lomond Signature Blended Scotch Whisky consists of a blend of scotch malt whisky and scotch grain whisky, produced by Loch Lomond Group and bottled at the company's Glen Catrine Bonded Warehouse site, 7 Laigh Road, Catrine, Ayrshire, KA5 6SR.

Grain whisky is distilled continuously from a mash of whole cereals, saccharified by the diastase of malted barley and fermented by the action of yeast. Malt whisky is batch distilled in pot stills from a mash of malted barley, saccharified by the indigenous diastases and fermented by the action of yeast. The alcohol content of the distilled spirits is less than 94.8%. Malted barley only is used to produce malt whisky, and wheat and malted barley are used to produce grain whisky.

This whisky is a blend of grain and malt whiskies that have been matured in oak casks of less than 700 litre capacity for a minimum of three years. After maturation, the spirit strength is reduced to the bottling strength of 40.0% ABV using demineralised water.

The whisky contains permitted spirit caramel colour (E150a).

Loch Lomond Signature Blended Scotch Whisky does not contain artificial flavourings. This product contains no ingredients derived from genetically modified organisms according to Regulation EC 1829/2003 and 1830/2003 and does not contain any allergenic materials as defined in Regulation 1169/2011 on food information to consumers.

Loch Lomond Signature Blended Scotch Whisky is produced in Scotland under modern hygienic conditions subject to the control of the Public Health Authorities. The product is
